Academic Year 2025-2026

Kyoto Prefectural University of Medicine Graduate School of Medical Science

Integrated Medical Science Doctoral Course

Application Guidelines for Students

Kyoto Prefectural University of Medicine, Graduate School of Medical Science

https: //www.kpu-m.ac.jp/ 465 Kajii-cho, Kawaramachi-Hirokoji, Kamigyo-ku, Kyoto, Japan 602-8566 gkyoumu@koto.kpu-m.ac.jp

Academic Year 2025-2026 Kyoto Prefectural University of Medicine Graduate School of Medical Science Integrated Medical Science Doctoral Course

Entrance Exam Schedule

Early-term Exam

- Admissions capacity: 60 (including non-students*)
- Application period: July 29 (Mon) August 16 (Fri), 2024
- Entrance exam date: September 10 (Tue), 2024
- Results notification: October 11 (Fri), 2024

Late-term Exam

- Admissions capacity: 10 (including non-students*)
- Application period: November 25 (Mon) December 6 (Fri), 2024
- Entrance exam date: January 15 (Wed), 2025
- Results notification: February 13 (Thu), 2025

* *Non-students* refer to those employed full-time (or contracted to work) by a corporation, research institute, hospital, or government office at the time of enrollment in the Graduate School of Medical Science, Kyoto Prefectural University of Medicine.

Academic Year 2025-2026 Kyoto Prefectural University of Medicine Graduate School of Medical Science Integrated Medical Science Doctoral Course

Application Guidelines for Students

1 Admissions Capacity

70 students (Early-term exam: 60 students, Late-term exam: 10 students)

2 Program

Integrated Medical Science, PhD

3 Course, Field and Subjects

(1) General Course / North Campus Course in Community Medicine

Course	Field	Main Subjects
General Course	Community Health and Social Medicine	Molecular-Targeting Prevention Epidemiology for Community Health and Medicine Forensic Medicine Emergency Medicine General Medicine & Community Healthcare Lifelong Health and Medicine Innovative Administration for Community-based Healthcare Department for Medical Innovation and Translational Medical Science Biostatistics Biomedical Ethics Mathematics and Statistics in Medical Sciences
	Human Growth and Development	Pediatrics Pediatric Surgery Obstetrics and Gynecology Communication, Education and Language
	Emerging and Genomic Medicine	Genomic Medical Sciences Biochemistry and Molecular Biology Department of Drug Discovery Medicine Infection Control & Molecular Laboratory Molecular Diagnostics and Therapeutics Inflammation and Immunology Endocrinology and Metabolism Molecular Cardiology and Vascular Regenerative Medicine Molecular Cardiology and Hypertension Respiratory Molecular Medicine Molecular Gastroenterology and Hepatology Molecular Hematology and Oncology Molecular Neurology and Gerontology Dermatology Plastic and Reconstructive Surgery

Course	Field	Main Subjects
General Course	Biological Data and Functional Morphology	Anatomy and Neurobiology Anatomy and Developmental Biology Molecular Cell Physiology Physiology and Systems Bioscience Fundamental physics and life science Cell Biology Basic Geriatrics
	Pathological Analysis and Regulatory Medicine	Surgical Pathology Pathology and Cell Regulation Pathology and Applied Neurobiology Infectious Diseases Immunology Molecular Pharmacology Psychiatry Radiology Medical Chemistry
	Functional Control and Regenerative Medicine	Digestive Surgery Transplantation and Regenerative Surgery Endocrine Surgery Cardiovascular Surgery General Thoracic Surgery Neurosurgery Orthopaedics Rehabilitation Medicine Ophthalmology Otolaryngology-Head and Neck Surgery Urology Anesthesiology Palliative Medicine Dental Medicine Cellular Regenerative Medicine

(2) Professional Training Course in Cancer Medicine

Major Subjects
Molecular Hematology and Oncology
Diagnostic and Therapeutic Radiology
Comprehensive Palliative Care Medicine
Pediatrics
Obstetrics and Gynecology
Respiratory Molecular Medicine
Dermatology
Molecular Gastroenterology and Hepatology
Digestive Surgery
Endocrine Surgery
General Thoracic Surgery
Neurosurgery
Orthopaedics
Otolaryngology-Head and Neck Surgery
Urology

(3) Training Course in Forensic Generalist, Forensic Specialist

Course	Major Subjects
Training Course in Forensic Generalist, Forensic Specialist	Forensic Medicine

Notes

When applying, students must consult with the academic advisor (professor) from whom they wish to receive research guidance regarding their research topic, and discuss submission of their application with their advisor.

Applicants with unsatisfactory test scores will not be admitted, even if the number of applicants is below admissions capacity.

4 Eligible Applicants

- 1) Those who have graduated (or are expected to graduate by March 2025) from a school of medicine, faculty of dentistry, or 6-year university program in pharmacology or veterinary medicine.
- 2) Those who have completed (or are expected to complete by March 2025) the Master degree course at the Graduate School of Medical Science of Kyoto Prefectural University of Medicine.
- 3) Those who have completed (or are expected to complete by March 2025) 18 years of school education in a foreign country with a final course of study in medicine, dentistry, pharmacology, or veterinary medicine.
- 4) Those who have completed (or are expected to complete by March 2025) 18 years of formal school education provided by a foreign institute by taking distance/online programs while residing in Japan.
- 5) Those who have completed (or are expected to complete by March 2025) an undergraduate program provided by foreign institutes which is designated by the Ministry of Education, Culture, Sports, Science and Technology in Japan (hereafter "the MEXT") (limited to programs which is equivalent to the 18 years of formal school education in Japan).
- 6) Those who have been awarded (or are expected to award by March 2025) a degree equivalent to bachelor's degree by completing a 5 years or longer program at a foreign university/other foreign educational institution which have been accredited by the respective foreign government or a person who has obtained certification by the appropriate foreign governmental agency, or which has been designated by the MEXT as the equivalent thereof. (This includes those who have completed the distance/online program offered by the appropriate school by taking courses while residing in Japan as well as one of those foreign educational programs at an appropriate educational institution positioned in the school education system of the said country and designated by said authorization described in the preceeding ltem)
- 7) Those who have been designated by the MEXT (Notification No. 39, Ministry of Education, 1955).
- 8) Those who entered a graduate school pursuant to the provisions of Article 102-2 of the School Education Act, and who are acknowledged by Kyoto Prefectural University of Medicine Graduate School to possess academic ability sufficient for education at a graduate school level.
- 9) Those who demonstrated academic performance equivalent or superior to Eligibility Requirement "1)" on the individual eligibility screening given by the Graduate School of Medicine, Kyoto University and who will be at least 24 years of the age by March 31, 2025 (JST).

5 Application Period

Early-term Exam: July 29 (Mon) - August 16 (Fri), 2024

Late-term Exam: November 25 (Mon) - December 6 (Fri), 2024

Applications are accepted Monday through Friday from 9:00 am to 5:00 pm (closed Saturday and Sunday).

6 Where to Submit Application

465 Kajii-cho, Kawaramachi-Hirokoji, Kamigyo-ku, Kyoto, Japan 602-8566 Kyoto Prefectural University of Medicine, Student Affairs Office (Graduate School Division) e-mail: gkyoumu@koto.kpu-m.ac.jp

7 Application Procedure

Applicants must submit all required application materials to the Kyoto Prefectural University of Medicine, Student Affairs Office (Graduate School Division).

If mailing the application, all documents must be enclosed in the envelope designated by the Kyoto Prefectural University of Medicine Graduate School and sent by simplified registration mail. <u>All documents</u> <u>must be received on or before the deadline.</u> However, applications received after the deadline may be considered if sent by simplified registration express mail and postmarked on or before August 14 (Wed), 2024 for the early-term exam and December 4 (Wed), 2024 for the late-term exam.

Prior to submitting an application, students must consult with the academic advisor (professor) for their desired research area regarding their academic plans (research and education).

For information on the research areas of each laboratory, please refer to the Kyoto Prefectural University of Medicine website [https://www.kpu-m.ac.jp/].

1	*	Application form	All required fields must be completed.	
2		Certificate of graduation (or anticipated graduation)	An official certificate, certified and sealed by the university dean or department head (In Japanese or English). Those who have completed (or are expected to complete) the Master degree course must also submit a graduate school Certificate of completion. If you have graduated or completed your studies at a university or other institution outside Japan and your degree is not listed on your certificate, please submit your degree certificate as well. *Not required for expected graduates of the Master degree course at the Graduate School of Medical Science of Kyoto Prefectural University of Medicine. However, this excludes students enrolled in the University's Master's program on an exchange program.	
3	University transcript		An official transcript, certified and sealed by the university dean or department head (In Japanese or English). Those who have completed (or are expected to complete) the Master degree course must also submit a graduate school transcript. * Not required for expected graduates of the Master degree course at the Graduate School of Medical Science of Kyoto Prefectural University of Medicine. However, this excludes students enrolled in the University's Master's program on an exchange program.	

Required Application Materials (ed Application Materials (*forms specific to Kyoto Prefectural University of Medicine)	
		*	A multiple and a multiple for much	All ne success differences the second stand

			Two photos must be included with the application. Photos must meet the following specifications:	
4		Photographs	 Taken within 3 months of application date 5 cm (height) by 4 cm (width) Showing head and upper body Taken in full-face view, directly facing the camera, without any hats 	
			Write your name behind each photo and paste onto the specified area on the application form.	
			30,000 yen	
5	*	Application fee	Remit using the university-designated deposit form and submit proof of payment (slip C). Once accepted, the fee is not refundable for any reason.	
5			*Not applicable for graduate students who will complete the Master degree course at the Graduate School of Medical Science of Kyoto Prefectural University of Medicine in March 2025. However, this excludes students enrolled in the University's Master's program on an exchange program.	
6	*	Self-addressed stamped envelope (SASE) to receive exam admission ticket	Fill in your name, address, and postal code on the front of the envelope, and affix sufficient postage (to cover postage and simplified registration mail fee).	
7	*	Address labels	Fill in your name, address, and postal code. Labels will be used to send notification of acceptance (delivered on results notification date) and the proof of admittance (issued March 2025).	
8		Certificate regarding name [Only if applicable]	If the surname on the certificate or other documents differs from the name on the application form, enclose proof of the change (e.g. an extract from the family register).	
9		Copy of residence card (or copy of passport)	International students only. Residence card must be submitted as a photocopy of both sides of the front and back. However, those who have not yet arrived in Japan must submit a copy of your passport.	
		* Enrollment consent form [Only if applicable]	Those who wish to continue to work full-time after enrollment must submit a 'Letter of Acceptance to Study' designated by the University, completed and stamped by their employer.	
			Those who are required to submit the form at the time of application.	
10	*		 Those who are currently working full-time at the time of application and plan to continue working after enrolment. 	
			 Those who are currently working full-time at the time of application and intend to continue working after enrolment. 	
			Students who obtain full-time work after enrollment must notify the school promptly by submitting the enrollment consent form.	

Notes

- 1) Incomplete applications will not be processed.
- 2) Students found to have falsified application information will be subject to withdrawal of admission, even after enrollment.
- 3) Application documents will not be returned for any reason.
- 4) Applicants must immediately notify the Student Affairs Office (Graduate School Division) of any changes to their mailing address.
- 5) Applicants with physical disabilities who require assistance during examinations or school attendance should request this with the Student Affairs Office (Graduate School Division) prior to application.

How to fill out the "Courses and Subjects" section of the application form

1 Course Selection

Applicants must select either the <u>General Course</u>, the <u>North Campus Course in Community Medicine</u>, the <u>Professional Training Course in Cancer Medicine</u> or the <u>Training Course in Forensic Generalist</u>, <u>Forensic Specialist</u> and designate their selection in the appropriate field on the application.

2 Subject Selection

(1) General Course or North Campus Course in Community Medicine Applicants

Selection of "main subject" and supplementary subjects

- 1) <u>Applicants should consider the "Basic Approach to Department Assignments" below and select one main subject and one supplementary subject (i.e., a "linked supplementary subject"). These subjects must be declared in the required fields on the application.</u>
- 2) The major subjects are listed on pages 3-4. <u>Students must consult with the academic advisor</u> (professor) from whom they wish to receive research guidance regarding their selection.

Procedure for Selecting Linked Supplementary Subjects

One supplementary subject must be taken as a required linked supplementary subject, and must be selected from outside the subject group of the student's main subject (see Table: Group A, Group B).

(Example) If the student selects Endocrinology and Metabolism (Group B) as the main subject, the linked supplementary subject must be selected from among those listed in Group A.

Basic Approach to Department Assignments

- 1) Department assignments are made by the Graduate School of Medical Science with consideration for academic/research guidance, with the aim of further elevating the quality of research conducted at the Kyoto Prefectural University of Medicine.
- 2) Department assignments are made to promote collaboration and integration between subject areas.
- 3) Department assignments are made to ensure graduate students receive sufficient and necessary academic/research guidance in their subject area.
- 4) Based on the above, students must select and enroll in a "linked supplementary subject" from the group outside their main subject. This facilitates academic/research guidance for graduate students.
- 5) Admitted students will be assigned their main subject areas according to their preference, but with priority given to academic rank (achievement).

(2) Professional Training Course in Cancer Medicine or Training Course in Forensic Generalist, Forensic Specialist

- 1) <u>Applicants must select one major subject area and designate it in the specified field on the application.</u>
- 2) The major subjects are listed on pages 3-4. <u>Students must consult with the academic advisor</u> (professor) from whom they wish to receive research guidance regarding their selection.
- 3) In addition, do not fill in the "Linked Supplementary Subject" field as a blank.

Table: Linked Supplementary Subject Groups (Group A / Group B)

Group	Supplementary Subjects	Field	
	Molecular-Targeting Prevention		
	Epidemiology for Community Health and Medicine		
	Forensic Medicine		
	Lifelong Health and Medicine		
	Innovative Administration for Community-based Healthcare	Community Health and Social	
	Department for Medical Innovation and Translational Medical Science	Medicine	
	Biostatistics		
	Biomedical Ethics		
	Mathematics and Statistics in Medical Sciences		
	Communication, Education and Language	Human Growth and Development	
	Genomic Medical Sciences		
	Biochemistry and Molecular Biology	Emerging and Genomic Medicine	
	Department of Drug Discovery Medicine		
Group A	Anatomy and Neurobiology		
	Anatomy and Developmental Biology		
	Molecular Cell Physiology	Biological Data and Functional	
	Physiology and Systems Bioscience	Morphology	
	Fundamental physics and life science		
	Cell Biology		
	Basic Geriatrics		
	Pathology and Cell Regulation		
	Pathology and Applied Neurobiology	Dethala singl Anglesia and Demulaters	
		Pathological Analysis and Regulatory Medicine	
	Molecular Pharmacology		
	Medical Chemistry		
		Functional Control and Regenerative	
	Cellular Regenerative Medicine	Medicine	
	Emergency Medicine	Community Health and Social	
	General Medicine & Community Healthcare	Medicine	
	Pediatrics		
	Pediatric Surgery	Human Growth and Development	
	Unsternes and Gynecology		
	Molecular Diagnostics and Therapeutics		
	Inflammation and Immunology		
	Endocrinology and Metabolism		
	Molecular Cardiology and Vascular Regenerative Medicine		
	Molecular Nephrology and Hypertension		
	Respiratory Molecular Medicine	Emerging and Genomic Medicine	
	Molecular Gastroenterology and Hepatology		
	Molecular Hematology and Oncology		
	Molecular Neurology and Gerontology		
	Dermatology		
Group B	Plastic and Reconstructive Surgery		
Group D	Surgical Pathology	Pathological Analysis and Regulatory	
	Psychiatry	Medicine	
	Radiology		
	Digestive Surgery		
	Transplantation and Regenerative Surgery		
	Endocrine Surgery		
	Cardiovascular Surgery		
	General Inoracic Surgery	Functional Control and Regenerative Medicine	
	Orthonoodics		
	Pababilitation Medicine		
	Otolaryngology-Head and Neck Surgery		
	Urology		
	Anesthesiology		
	Palliative Medicine		
	Dental Medicine		

8 Admissions Selection Process

Selection is based on a comprehensive review of aptitude test scores (foreign language exam, proficiency exam, and oral exam) and academic transcripts.

Entrance Exam Schedule

General Candidate Exam

Date	Time	Aptitude Test	Location
Early-Term:	9:15 – 11:15	Foreign language (English) exam	Kyoto Prefectural University of
Sep. 10 (Tue), 2024 Late-Term:	12:30 – 14:30	Proficiency exam	1st floor
Jan. 15 (Wed), 2025	15:00 –	Oral exam (interview)	To be announced on exam date

Notes

 The foreign language (English) exam consists of English-Japanese and Japanese-English translation. Candidates are permitted to bring one English-Japanese dictionary and one Japanese-English dictionary; electronic and medical dictionaries are not allowed.

2) In the proficiency exam, candidates must select and respond to two prompts from the list provided.

Foreign Candidate Exam A

Date	Time	Aptitude Test	Location	
Early-Term:	9:15 – 11:15	Foreign language (English) exam	Kyoto Prefectural University of	
Sep. 10 (Tue), 2024 <i>Late-Term:</i>	12:30 – 14:30	Proficiency exam	1st floor	
Jan. 15 (Wed), 2025	15:00 –	Oral exam (interview)	To be announced on exam date	

Notes

- The foreign language (English) exam consists of English-Japanese translations only. Candidates are permitted to bring one English-Japanese dictionary; but electronic and medical dictionaries are not allowed.
- 2) In the proficiency exam, candidates must select and respond in either Japanese or English to two prompts from the list provided.

Foreign Candidate Exam B

Date	Time	Aptitude Test	Location
Early-Term: Sep. 10 (Tue), 2024	12:30 – 14:30	Proficiency exam (comprehensive exam)	Kyoto Prefectural University of Medicine, school building of Nursing 1st floor
<i>Late-Term:</i> Jan. 15 (Wed), 2025	15:00 –	Oral exam (interview)	To be announced on exam date

Notes

1) Candidates are permitted to bring one English dictionary to the proficiency exam (comprehensive exam); electronic and medical dictionaries are not allowed

2) The proficiency exam (comprehensive exam) will be conducted in English, and responses must be in English.

International applicants must select Foreign Candidate Exam A or B on their applications. The selection cannot be changed after the application is submitted.

International applicants who have graduated (or are expected to graduate by March 2025) from a Japanese university must take the General Candidate Exam.

9 Notification of Results

Early-Term Exam: Oct.11 (Fri), 2024, 10:00 am

Late-Term Exam: Feb.13 (Thu), 2025, 10:00 am

The results of the early-term and late-term exams will be posted on the Kyoto Prefectural University of Medicine Student Affairs Division bulletin board, and a notification of acceptance will be sent to accepted applicants. The Kyoto Prefectural University of Medicine website will also post the identification numbers of accepted applicants after the date and time listed above. However, information published on the website is unofficial and intended solely for reference. Please verify with the official results posted on the bulletin board of the Kyoto Prefectural University of Medicine Student Affairs Office or with the mailed notification of acceptance. Please note that we do not respond to inquiries by phone.

10 Registration Process

- 1) Enrollment fee: 282,000 yen (due upon enrollment)*
- 2) Tuition: 535,800 yen (assessed separately after enrollment)**
- 3) Instructions regarding the enrollment process, schedule, and required materials will be provided in the notification of acceptance.

*Those who are expected to complete the Master degree course at the Graduate School of Medical Science of Kyoto Prefectural University of Medicine in March 2025 are not required to pay an entrance fee. However, this excludes students enrolled in the University's Master's program on an exchange program.

*The enrollment fee may be reduced, waived, or postponed if payment is a hardship due to a natural disaster that occurred within 1 year of the date of admission.

**Tuition may be reduced or waived if payment is an economic hardship and the student is recognized for excellent academic achievement.

Notes

- 1) Enrollment fee and tuition amounts are subject to change. If tuition is modified during a student's period of attendance, the new tuition will apply from the time of revision forward.
- 2) The enrollment fee and tuition are non-refundable.
- 3) Tuition is to be paid over two semesters (first and second semester).
- 4) Offer of admission may be rescinded if registration is not completed by deadline.

11 Other Information

1) Candidates must arrive at the testing center at least 15 minutes prior to the start of each exam.

2) To request the application guidelines and/or application form by mail, please enclose a self-addressed (postal code, address, name), stamped (250 yen), square type-2 envelope, clearly marked "Graduate School of Medical Science Doctoral Course Application Form Request" on the front side using red ink. Requests must be mailed to the address below.

465 Kajii-cho, Kawaramachi-Hirokoji, Kamigyo-ku, Kyoto, Japan 602-8566

Kyoto Prefectural University of Medicine, Student Affairs Office (Graduate School Division)

Kyoto Prefectural University of Medicine, Graduate School of Medical Science Integrated Medical Science Doctoral Course Enrollment Guide

1) Objective

The aim of the Graduate School of Medical Science at Kyoto Prefectural University of Medicine is to foster the advanced research capabilities necessary to conduct independent research, as well as a wealth of academic knowledge underlying these capabilities.

2) Length of Study

The standard length of study is 4 years.

*Upon review of special circumstances such as full-time employment, candidates may be permitted to enroll in the educational program for a scheduled period beyond the standard length of study (up to 8 years). For details, please contact the Student Affairs Office (Graduate School Division).

e-mail: gkyoumu@koto.kpu-m.ac.jp

3) Programs, Course Overview, and Research Topics

Outlined on the following page.

4) Degrees Awarded

Students who complete the program are awarded a doctoral degree in medicine.

The doctoral degree is awarded to candidates who have been enrolled in the graduate school for a minimum of 4 years (3 years for those with exceptional research achievements), earned 30 or more credits satisfying the program requirements, and passed both the final examination and dissertation examination after receiving the required research guidance.

* * Students who choose the North Campus Course in Community Medicine are required to work at a hospital in the Chutan region or north of Kyoto Prefecture for at least three years while enrolled in the graduate school, and when submitting their doctoral thesis, they will be required to submit a certificate of employment during their enrollment.

5) Japan Student Services Organization Scholarships

There is scholarship programs for Japanese students (loan) for graduate students from the Japan Student Services Organization, and those who are academically and character-excellent, healthy, and recognized as having difficulty paying tuition fees due to their family's financial situation will be recommended to the Japan Student Services Organization.

6) Kyoto Prefectural University of Medicine Medical Innovation Fellowship

Following its adoption as a recipient of the Japan Science and Technology Agency (JST) SPRING Program for Challenging Research for Next-Generation Researchers, Kyoto Prefectural University of Medicine has established the Kyoto Prefectural University of Medicine Medical Innovation Fellowship with the aim of supporting doctoral students who contribute to improving their research capabilities.

Through financial support for doctoral students (research concentrating support grants) and career path support and training programs, the program aims to foster research talent who contribute to creating innovation. Selected students (up to six students per year) will receive 2.4 million yen per year in research concentrating support grants (equivalent to living expenses) and 100,000 yen per year in research expenses over the four years of their doctoral studies at the Graduate School of Medicine.

Overview of Programs and Courses

Integrated Medical Science Doctoral Course

In response to the sophistication, diversification, and interdisciplinary advancement of medicine/medical care, it became imperative for Kyoto Prefectural University of Medicine to foster unique and superior talent possessing outstanding character and independent problem-solving abilities, thus continually developing and maintaining academic creativity. The graduate school was reorganized in April 2003 to achieve this end.

The philosophy of the restructuring placed utmost emphasis on the cultivation of unique and superior talent. Thus, the selection of majors was changed from the previous five majors to a single integrated medical science program consisting of six fields and core areas of study, with the aim to provide detailed guidance customized to each graduate student and allow for a highly flexible course offering.

In April 2008, the Specialized Course for Oncologic Pharmacotherapy was established, independent from the conventional General Course, to train high-quality specialists who would become the new leaders in cancer treatment. This course was renamed the Professional Training Course in Cancer Medicine in June 2012, when its composition was changed to include the "Specialist Course for Multidisciplinary Radiodiagnosis and Radiotherapy" and the "Specialist Course for Comprehensive Palliative Care" in addition to the conventional "Specialist Course for Oncology". Since then, the course has continued to develop, with the addition of a course focusing on pediatric and AYA cancers.

Furthermore, following adoption by the Ministry of Education, Culture, Sports, Science and Technology in the "Revitalization Program for the Training of Basic Research Physicians" for fiscal year 2021, we established the *Training Course in Forensic Generalist, Forensic Specialist* in April 2022 to train doctors and dentists who can utilize the knowledge and skills of forensic medicine in clinical medicine, etc.

In April 2024, we established the *North Campus Course in Community Medicine* to promote research aimed at solving issues in regional medical care and local communities, which is one of our university's missions.

General Course

1) Community Health and Social Medicine

The field of Community Health and Social Medicine includes the following subjects: Molecular-Targeting Prevention, Epidemiology for Community Health and Medicine, Forensic Medicine, Emergency Medicine, General Medicine & Community Healthcare, Lifelong Health and Medicine, Innovative Administration for Community-based Healthcare, Department for Medical Innovation and Translational Medical Science, Biostatistics, Biomedical Ethics and Mathematics and Statistics in Medical Sciences. To disseminate the university's advanced education, research results, and medicine back to society, the field has also includes the subjects of Community Administrative Systems for Healthcare and Welfare, and Community and Environmental Medicine, both of which organically utilize the medical center at Kyoto Prefectural University of Medicine, an institution that has made great achievements in promoting community heath and improving public health in the region.

This field of study aims to foster abilities for research and implementation that can be widely utilized in the field of Community Health and Social Medicine, while also cultivating highly specialized physicians and medical researchers who possess the ability to build a system to improve the quality of community health.

2) Human Growth and Development

The field of Human Growth and Development includes the following subjects: Prenatal Medicine, Neonatal-Perinatal and Developmental Medicine, Adolescent Medicine, and Obstetrics and Gynecology. It is a medical field centered around human birth and development, and broadly encompasses related fields that advance research on issues related to human growth and development. The field aims to cultivate highly specialized physicians and medical researchers with the ability to continue pioneering advances in the field of Human Growth and Development.

3) Emerging and Genomic Medicine

Emerging and genomic medicine have entered the post-genomic era; development and expansion of new research methods are now required in this field. Today, this field of study boldly blazes new trails based on genomic medicine and applies the results of emerging research to the medical field to promote further research.

Thus, the Emerging and Genomic Medicine field conducts developmental studies spanning various organs of the body, based on research in basic biochemistry and molecular biology and made possible by the organic and wide-ranging mutual collaboration between basic and clinical medicine. In this way, this field of study aims to foster highly specialized physicians and medical researchers who can independently put ideas into action.

4) Biological Data and Functional Morphology

Living organisms possess diverse regulatory systems to maintain homeostasis; the breakdown of these systems causes disease. Thus, it is extremely important to elucidate the control mechanisms that regulate biological data and functionality.

The field of Biological Data and Functional Morphology advances research on brain function and steroid hormones; research on the molecular mechanisms that determine the lateral axes of vertebrates; functional morphological research of the biorhythmic center; research on the generation, development, and plasticity of neural circuits; comprehensive research aimed at understanding higher-order nerve functions—that is, functional integration in the brain (learning, memory, cognition, emotion, consciousness, will, etc.); and research to clarify a wide range of physiological control mechanisms, such as epithelial transport regulation, environmental adaptation, and control of the microcirculation system.

This field of study aims to foster specialized physicians and medical researchers with the ability to conduct comprehensive research shedding light on the control mechanisms underlying biological data and functionality, making use of cutting-edge and diverse methods effective in analyzing functional data from morphological data.

5) Pathological Analysis and Regulatory Medicine

Proper medical care made possible by accurate analysis of a patient's medical condition. Advanced and detailed pathological analysis has supported modern advanced medicine, and this field has come to be regarded as the most basic source of medicine/medical care, since pathological analysis will become the foundation for cutting-edge emerging medicine of the future. This field of study will continue to advance research on various methodologies as it applies to a wide range of medical areas.

The field of Pathological Analysis and Regulatory Medicine comprehensively tackles the pathological analysis related to mental phenomena by combining new developments in neuroimaging methods with neuro-scientific, molecular-biological, and molecular-pharmacological analysis. With respect to the study of pathological control rooted in molecular pharmacology, this field focuses on developing methods to control the diabetes and neurodegenerative diseases, which have greater social demands; with respect to the study of

infectious immunity and parasitic pathological control, the field carries out applied studies to analyze the roles of interferons and cytokines and the functionality of mast cells, and channels the results back into pathological control.

Because the scope of this field of study is wide and diverse, the departmental faculty leading the education and research guidance will work together to train physicians and medical researchers who possess the ability to promote integrated medicine and medical care.

6) Functional Control and Regenerative Medicine

The objective of all medical care is total healing. Thus, society has turned its attention to regenerative medicine and medical care; expansion of this area has been greatly anticipated.

The field of Functional Control and Regenerative Medicine cultivates talent capable of advancing new areas of transplantation and regenerative medicine by assigning specialized groups to lead academic and research guidance in studies such as developmental research of pancreas, heart, and liver transplants; research of tissue regeneration using somatic stem cells and embryonic stem cells; and research of stem cell transplants. In addition, the field improves surgical methods and focuses on developing new technologies to prioritize function preservation, cultivating the talent to develop assistive devices and training the talent capable of progressing QOL-enhancing medicine (including pain clinics and rehabilitation) and resuscitation medicine.

Rooted in Kyoto Prefectural University of Medicine's achievements in renal and corneal transplantation, this field aims to train specialized physicians and medical researchers who possess the ability to not only expand and develop transplantation medicine, but also to lead in a new era of transplantation and regenerative medicine.

North Campus Course in Community Medicine

This course is a graduate school course for working adults based at the north campus of Kyoto Prefectural University of Medicine, and the admission requirement is that the student is a doctor working full-time at a hospital in the Chu-tan region of Kyoto Prefecture or north, including the affiliated North Medical Center Kyoto Prefectural University of Medicine. The course also assumes that graduates of the regional quota and Jichi Medical University will advance to graduate school while completing the mandatory years, making it possible to obtain a degree within the mandatory years.

In particular, the course focuses on the social issues known as the "2040 Problem," which are manifested as a crisis in regional medicine and related fields, such as the rapid decline in the working generation due to an extremely low birth rate and aging population, the expansion of regional uneven distribution of the population, and the difficulty of maintaining local government functions, by taking a bird's-eye view of the current state of regional medicine and local communities and engaging in research aimed at solving them. Using the northern Kyoto region as a model, the course aims to develop cross-border leaders with transferable skills who will open up the future beyond the complex medical and social issues.

Professional Training Course in Cancer Medicine

The Cancer Recovery Specialist Training Course, formerly the Specialized Course for Oncologic Pharmacotherapy, established in 2008, aims to train high-quality specialists who will become leaders in medical

oncology.

In particular, the course will implement cross-disciplinary education and guidance in cancer research to physicians certified by the medical societies of each department, or those who have completed their medical specialist training, allowing them to attain qualifications and degrees as oncologic pharmacotherapy specialists, radiology specialists, radiotherapists, pediatric hematology/oncology specialists, or palliative care specialists. Through this educational guidance, the course also intends to train healthcare team professionals in multidisciplinary treatment of cancer.

1) Core Subject Areas

To train medical oncologists capable of implementing multidisciplinary cancer treatment, the core subject areas aim to provide lectures on multi-organ cancers, teach fundamental knowledge about tumors through clinical training, and provide training in diagnosis and treatment through actual clinical practice. The objectives of the study areas include acquisition of cutting-edge knowledge from fundamental biology, such as histological characteristics of tumor cells in each organ and the molecular analysis of malignant tumors; cultivation of knowledge necessary to execute specialized research, such as tumor diagnoses, molecular-targeted therapy, immunotherapy, and objective evaluation of their therapeutic effects; and palliative care to improve the QOL of patients and their families.

2) Specialized Subject Areas

The specialized subject areas are intended to provide specialized knowledge and procedures to diagnose and treat tumors in each organ and anatomical region, and to train high-quality specialists with the capacity to become leaders in medical oncology through exposure to the latest technology practiced in each department, such as surgical treatments, molecular-targeted therapy, immunotherapy, and chemotherapy. Specifically, the techniques include multi-drug combination therapy, high-dose chemotherapy combined with hematopoietic stem cell transplantation (HSCT), diagnostic imaging using MRI/CT, SPECT/PET, and radiation therapy. In addition, the specialized subjects aim to provide practical knowledge and techniques with respect to the fundamentals and clinical applications of genomic medicine through genomic analysis and participation in genetic counseling.

Training Course in Forensic Generalist, Forensic Specialist

This course is jointly operated by our university, Shiga University of Medical Science, and Osaka Medical and Pharmaceutical University, and aims to train doctors and dentists who can utilize the knowledge and skills of forensic medicine in clinical medicine.

1) Features of the curriculum

To smoothly advance local policies related to cause of death investigations and contribute to local health and safety promotion, we train forensic specialists, doctors with knowledge of forensic medicine, and dentists with knowledge of forensic medicine. Those who complete this curriculum will contribute more to the local community by engaging in accurate cause of death investigations that lead to the prevention of preventable deaths and medical care for abused people and crime victims.

2) Course overview

Forensic Physician Training Course

This course primarily trains clinicians with knowledge and skills related to forensic medicine. The course aims to train students to be able to perform appropriate autopsies for unnatural deaths encountered in the medical field, to be able to examine abused children and elderly people and accurately determine the mechanism of injury, and to provide appropriate grief care to crime victims and the families of the deceased.

Forensic Dentist Training Course

This course primarily trains dentists with knowledge and skills related to forensic medicine. Students will first be able to see the whole body and understand the outline of death. Students will then be able to observe the teeth of the corpse, correctly create a dental chart, perform identification work, and examine abused children and elderly people, check for dental findings and the presence or absence of bite marks, and accurately determine the mechanism of maxillofacial injury.

Forensic Specialist Training Course

This course trains students to be experts in forensic medicine, with the main duties being forensic practice and appraisal. The goals of this program are to be able to perform forensic autopsies and provide correct forensic diagnosis, to have a wide range of knowledge in forensic medicine, to be able to correctly present scientific findings in court, and to be able to engage in research related to forensic medicine.

General Course \checkmark North Campus Course in Community Medicine

Community Health and Social Medicine

Subject	Advisor(s)	Research Topics
Molecular-Targeting Prevention	Professor Michihiro Mutoh	 Preventive intervention trial for colorectal cancer by chemoprevention Development of novel cancer prevention based on regulation of gene expression Development of novel cancer prevention for cancer high-risk group (preemptive medicine) Identification of target molecules of cancer-preventive compounds using chemical biology Analysis of molecular mechanisms of cancer preventive compounds through the regulation of gene expression Development of prevention against carcinogenesis by epigenetic abnormalities Development of molecular-targeted combination prevention for cancers based on the molecular mechanisms Dissemination and implementation research for preventive awareness.
Epidemiology for Community Health and Medicine	Professor Naoyuki Takashima	 Epidemiological studies of non-communicable diseases Epidemiological studies of disability Epidemiological studies related to community health
Forensic Medicine	Professor Hiroshi Ikegaya	 Forensic pathology Forensic toxicology Utilization of microorganisms in forensic medicine Disaster response and abuse prevention Medical jurisprudence and bioethics Methodology for age estimation using aging factors
Telemedicine (Advanced Course)	Professor Kei Yamada	Community medical support systemsTelemedicine/health information networks
Emergency Medicine	Professor Bon Ohta	 Methodology for evaluation of the quality of emergency medical care Advancement of new rules for consultation with respect to emergency diagnosis and treatment Verification of the importance of communication in emergency medicine Construction of a database for emergency medical care to verify each region's emergency medical system Proposal of a more fair and efficient emergency medical system in response to decreasing birthrate and aging population Comparison of emergency medical systems in other countries Examination of the overlap of emergency medicine with pre- and postgraduate medical education and consideration of improvements in instruction methodology Proposal for the future of the disaster medical system
Alternative Medicine (Advanced Course)	Professor Michiaki Fukui	 Social medicine research on complementary and alternative medicine Traditional Chinese medicine and herbal remedies Aromatherapy and massage Acupuncture and moxibustion Dietary supplements

Subject	Advisor(s)	Research Topics
Medical Psychology (Advanced Course)	Professor Jin Narumoto	 Relationship between medical care providers and patients Holistic medical care (biological / psychological / social / ethical model) Palliative care
Community Environmental Medicine (Advanced Course)	Professor Takaaki Nakaya	 Emerging/re-emerging infectious diseases and the environment Diagnosis and treatment of emerging and re-emerging infectious diseases Effects of the environment on the immune system
General Medicine & Community Healthcare	Professor Satoru Shikata	 Primary care or general medicine Factors associated with aging and longevity Use of geographical information (GIS) to improve the efficiency of community health systems Team-based medical care and risk communication in community health
Lifelong Health and Medicine	Professor Kazuhiro Yagita	 Translational research of Lifelong health and medicine Animal models for Lifelong health and medicine Clinical research for Lifelong health and medicine
Innovative Administration for Community-based Healthcare		 POCT (point-of care testing) in community-based medicine Healthcare administration Effects of community on healthcare and aging
Department for Medical Innovation and Translational Medical Science	Professor Norito Katoh	 Clinical research ethics Health services and clinical research Implementation of clinical research
Biostatistics	Professor Satoshi Teramukai	 Clinical study design Quality control of clinical study data Data analysis methods
Biomedical Ethics	Professor Koichi Setoyama	 Research integrity and research ethics: consent and protection of research subjects in medical research Paternalism in medical care and conflicts among the four basic principles of medical ethics and their resolution Ethical, legal, and social issues (ELSI) caused by advanced technology in frontier of medical science
Mathematics and Statistics in Medical Sciences		 Topology and its applications in life sciences Differential and difference equations appearing in life sciences Data analysis using statistical and topological methods

Human Growth and Development

Subject	Advisor(s)	Research Topics
Pediatrics	Professor Tomoko Iehara	 Identifying activators of endocrine and thermogenic function in brown fat Discovery of biomarker and a new class of anti-obesity drug in childhood obesity Pathological analysis of developmental and epileptic encephalopathy using human disease-specific iPS cells Clarification of the functional condition of genetic abnormalities caused by rhabdomyosarcoma and their pathological diagnosis, and application to development of molecular-targeted drugs Development of diagnosis methods for genetic abnormalities with poor prognoses using isolated tumor DNA in the blood serum of neuroblastoma patients Development of immunotherapy for pediatric cancer Development of new therapeutic drugs for pediatric cancer Genetic analysis of intractable hematological malignancies to identify the novel target of therapy. Biomarker research in pediatric rheumatic diseases. Development of cell-based, new molecular targeted therapies in rheumatic diseases. Prognostic prediction model for motor function in preterm infants using diffusion-tensor MRI imaging Long-term prognosis and prevention of chronic lung disease in babies with extremely low birth weight (under 1500 g) Impact of developmental care on neonatal growth Construction of a network of perinatal mother and baby medical centers Molecular pathological analysis of intravenous immunoglobulin- resistant Kawasaki disease Analysis of the mechanisms of intravenous immunoglobulin- resistant Kawasaki disease using iPS cell technology Clinical research in pathophysiology and treatment of arrhythmias in children Fundamental study of cardiac formation and morphogenesis Clinical research of chemotherapy-related cardiomyopathy Clinical research of cardiac failure of adult congenital heart disease
Pediatric Surgery	Professor Shigeru Ono	 Molecular biology and new treatment for pediatric solid malignant tumors Embryological study for the congenital anomalies of gastrointestinal tract Gastrointestinal function and physiology in pediatric patients Pathological analysis and new treatment for biliary atresia Pathology and carcinogenesis for anomalous arrangement of the pancreaticobiliary duct Basic research for small bowel transplantation in children

Subject	Advisor(s)	Research Topics
Obstetrics and Gynecology	Professor Taisuke Mori	 Elucidation of the mechanism of endometriosis and development of novel therapeutic strategies Novel diagnostic, therapeutic, and preventive methods for gynecological malignancies Clinical and basic research on reproductive physiology and gamete manipulation such as assisted reproductive techniques Analysis of the embryo-fetal-placental environment for maintenance of pregnancy Basic, epidemiological, and clinical research for comprehensive support of women's health Construction of a network to realize fertility preservation therapy. Establishment of a medical support system to realize prenatal diagnosis and fetal treatment
Communication, Education and Language	Professor Masataka Kizuka	 Research areas: The process of acquiring and developing professional knowledge and expertise. Methodology and practice of initial teacher education and the education of medical doctors employing case studies. Language communication by professionals (school teachers and medical doctors). The processes of child cognitive development (ex. language and learning) from the standpoint of educational theories, pedagogy, linguistics, medicine and related academic disciplines. English language teaching methodology, theory and practice. School education and medical care and development, enhancement and improvement of professional expertise of school teachers and medical doctors on remote islands in Japan and the United Kingdom. Theory and practice of initial teacher education and the education of medical doctors in the United Kingdom and other countries.

Emerging and Genomic Medicine

Subject	Advisor(s)	Research Topics
Genomic Medical Sciences	Professor Kei Tashiro	 Genetic analysis of multi-factorial diseases and cancer (GWAS and NGS) Development of a Glaucoma risk prediction system based on genetics Molecular biology of cytokines Establishment of technology to secure biological resources compatible with genomics and proteomics Molecular biology of regulation mechanisms for gene expression Development and application of new molecular-genetic and molecular-biological experimental techniques
Biochemistry and Molecular Biology		 Genome editing Development of treatment methods for genetic diseases using genome editing Elucidation of DNA repair mechanisms Biochemical and molecular biological analysis of tumorigenesis mechanisms Molecular mechanisms of intracellular signal transduction in cancer cells Molecular mechanisms of cell proliferation, differentiation, and cell death Molecular mechanism of biomolecular metabolism and functional expression Genomic and epigenomic analysis of cancer stem cells Clarification of the molecular basis of pediatric cancer pathophysiology Clarification of the mechanisms of development, differentiation, and tumorigenesis in hematopoietic cells Development of novel molecular targeted therapies for tumors associated with chromatin remodeling complex abnormalities
Department of Drug Discovery Medicine	Research Professor Mano Horinaka	 Development of rational screening system for agents against malignancies Development of unique but rational screening system for agents against a variety of diseases Academic-industrial collaboration on agents obtained by the screenings above Academic-industrial collaboration on cancer-preventive foods focusing on carcinogenic mechanisms Academic-industrial collaboration on development of a novel diagnostic system of cancer
Infection Control & Molecular Laboratory	Professor Yoko Nukui	 Molecular epidemiological analysis of drug-resistant bacteria and infectious diseases Development of clinical examination and diagnostic methods based on molecular pathology Pathological analysis of various diseases using flow cytometry
Molecular Diagnostics and Therapeutics		 Pathological analysis of neurological diseases using iPS cells Study of neurological diseases using Drosophila melanogaster
Inflammation and Immunology	Medical Professor Yutaka Kawahito	 Causes, pathology, treatment, and complication against complications of rheumatoid arthritis Analysis of factors for the pathological regulation of autoimmune diseases Sugar-chain molecules involved in abnormal immune responses Inflammation and arteriosclerosis Mechanisms of fibrosis

Subject	Advisor(s)	Research Topics
Endocrinology and Metabolism	Professor Michiaki Fukui	 Causes of type 1 diabetes Energy metabolism and molecular endocrinology Pathological analysis and gene therapy for endocrine and metabolic disorders Effects of diet and exercise therapy and their mechanisms Complications of type 2 diabetes and pathogenic mechanisms
Molecular Cardiology and Vascular Regenerative Medicine	Professor Satoaki Matoba	 Investigation of the regulation of myocardial metabolism and mitochondrial functions during heart failure Research on myocardial toxicity of anticancer drugs Clarification of the pathogenic mechanisms of cardiovascular diseases caused by abnormalities in cell membrane function Myocardial regeneration from human iPS (induced pluripotent stem) cells Investigation of disease mechanism and drug development by crisper screening Gene editing for therapy Study for prognosis related Treatment by transcatheter aortic valve replacement (TAVI) and transcatheter mitral valve closure. Novel arrhythmia research using IoT and AI Study based on cardiovascular disease registry Exercise physiology and optimal programming for patients with implanted cardio devices such as pacemakers and implantable defibrillators (ICD) Pathological analysis of heart valve diseases through new techniques of heart sounds, mechanocardiography, and echocardiography Development of new methods for diagnosis and treatment of pulmonary hypertension Clinical epidemiological study of acute myocardial infarction and adult congenital heart disease patients in the Kyoto/Shiga region
Molecular Nephrology and Hypertension	Professor Satoaki Matoba	 Molecular mechanism of transition from acute kidney injury to chronic kidney disease Molecular mechanism of renal congestion Clinical research of cardiovascular complications in CKD patients Clinical research of management of post-transplant patients Clinical research of steroid-induced diabetes
Respiratory Molecular Medicine	Professor Koichi Takayama	 Molecular pathology of lung cancer Clinical study of molecular-targeted therapies for lung cancer Effects of smoking on the lungs Cellular and molecular mechanisms of asthma Cellular and molecular pathology of acute lung injury Mechanisms of ion transport regulation and its role in respiratory diseases

Subject	Advisor(s)	Research Topics
Molecular Gastroenterology and Hepatology		 Diagnosis and therapy of tumors and inflammatory diseases in GI tract and biliary-pancreatic system using novel endoscopic systems Therapy of the viral hepatitis and evaluation of the outcome in success Analysis of the molecular and immunological mechanisms involved in the onset and advancement of liver cancer Treatment of cancers in GI tract, hepato-biliary-pancreatic system using novel drugs and analysis of the outcome Identification and analysis of genes indispensable for the onset of steatotic liver disease (SLD) Analysis of the pathology and outcome of MASH by multiple factors including SNPs Pathological analysis of gastrointestinal diseases by gut microbiota Diet, planetary health and sustainability Development of medical devices/materials related to endoscopic treatment Significance of liver-pancreas or organ-to-organ interaction in the occurrence of cancers and deteriorated inflammation Analysis of factors involved in progression and regression of cancers in GI tract and hepato-biliary-pancreatic system Basic and clinical study on the diagnosis/therapy of inflammatory bowel diseases Physiological study on the movement of the colon Protection against infection of COVID 19 using specific materials Analysis of the diseases in the liver and GI tract related to diabetes mellitus and heart diseases Analysis of the infectious and metabolic diseases in the liver and GI tract using organoid
Molecular Hematology and Oncology	Professor Junya Kuroda	 Identification and functional analysis of molecular abnormality underlying the pathogenesis for the development of molecular targeted therapy against of hematologic malignancy Clinical study for the factors associated with therapeutic response by chemotherapy and stem cell transplantation and with adverse events Development of novel cytogenetic/molecular diagnostic methodology for hematologic malignancy Functional analysis of tumor microenvironment in hematologic malignancy for hematologic malignancy Basic and clinical research with CAR-T therapy
Molecular Neurology and Gerontology		 Basic and clinical studies of dementia Basic and clinical studies of neurodegenerative disease Basic and clinical studies of white matter lesions Basic and clinical studies of cerebrovascular disease Basic and clinical studies of immune-mediated neurological disorders Basic and clinical studies of neurophysiology Basic and clinical studies of peripheral nerve Basic and clinical studies of epilepsy Rehabilitation for neurological disorders
Dermatology		 Basic, clinical, and epidemiological studies of skin allergies such as atopic dermatitis and contact dermatitis Analysis of the causes of intractable skin ulcers and study of new treatment Study of new treatment for skin malignancies combining immunotherapy and gene therapy
Plastic and Reconstructive Surgery	Medical Professor Toshiaki Numajiri	 Causes of keloids and hypertrophic scars Clinical study of cleft lip/palate Simulation training and computer-assisted surgery in the maxillofacial region

Subject	Advisor(s)	Research Topics
Anatomy and Neurobiology		 Neural circuits for stress response/emotional behaviors Molecular mechanisms and intracellular dynamics concerning physiological effects of neuropeptides involved in sex hormones and reproduction Autophagy in the nervous system Alpha-synuclein in the neurodegenerative diseases such as Parkinson's disease and Dementia with Lewy body dementia (DLB)
Anatomy and Developmental Biology	Professor Kenta Yashiro	 Intracellular signal transduction and morphogenesis Mechanism of cardiovascular development Molecular mechanism of cell fate commitment to cardiac cells Mechanism of cardiomyocyte maturation Differentiation and maintenance of cardiac progenitor cells Molecular and physiological difference between left and right ventricle Molecular mechanism of cilia underlying ciliopathy and heterotaxia
Molecular Cell Physiology	Professor Akiyuki Taruno	 Molecular and cellular mechanisms of chemical senses including taste and visceral sensation Chemical senses and lifestyle diseases Mechanisms, physiology, and pathophysiology of purinergic signaling Ion channel biophysics using patch clamp electrophysiology and live imaging Channelopathies Physiology of calcium homeostasis modulator (CALHM) ion channels
Physiology and Systems Bioscience	Professor Kazuhiro Yagita	 Formation, development, and aging mechanisms of the internal circadian clock Circadian rhythm sleep disorders and the internal circadian clock system Cell-based assays of circadian rhythms using ES/iPS cells Mammalian circadian clock and reproduction Analysis of local neural circuits using in vivo electrophysiology Human physiology of circadian rhythm
Fundamental physics and life science	Professor Yoichi Takanishi	 Structural analysis of soft matter as a biological model Application of nano-micelles using liquid crystal for drug delivery system Analysis of nonlinear phenomena Mathematical analysis of complex systems Mathematical model of open systems
Cell Biology	Professor Tatsuya Yoshizawa	 Regulatory mechanism of gene expression to keep quantity and quality of the bone Molecular pathological mechanism in the damage and the atrophy of the skeletal muscle Mechanism of homeostatic maintenance by bone- and muscle-derived hormones Mechanism of homeostatic maintenance by post translational fatty-acyl modification Development of drug delivery system for bone or muscle Cortical development and cellular metabolism
Basic Geriatrics		 Basic research and development of treatment methods for Alzheimer's disease, Parkinson's disease and ALS Liquid droplet and neurodegenerative diseases Analysis of molecular mechanisms for autophagic regulation Analysis of neural functions and autophagy

Pathological Analysis and Regulatory Medicine

Subject	Advisor(s)	Research Topics
Surgical Pathology	Medical Professor Eiichi Konishi	 Analysis of differential diagnoses of benign and malignant tumors based on the contrast between clinical and histological images Histomorphological analysis of differential diagnoses of benign and malignant tumors Genetic analysis useful for diagnosis of benign and malignant tumors Clarification of the prevalence/frequent susceptibility to gastrointestinal cancer Relationship analysis of morphological changes and genetic abnormalities
Pathology and Cell Regulation		 UV light-mediated cell manipulation Study of myocardial viability using Raman scattering spectroscopy Study of the tumor microenvironment using optical methods Optical molecular imaging for ultra-early detection of cancer and its lymph node metastasis Regulatory mechanism for heme biosynthesis and its applications to protoporphyrin fluorescence-based diagnosis of cancer
Pathology and Applied Neurobiology		 Investigation of pathogenesis on abnormal brain development, using genetically modified mice Pathological analysis of brain malformation using patients-derived neural stem/progenitor cells Molecular neurobiological studies on disordered corticogenesis Molecular pathological studies on human brain developmental disorders, neurodegenerative diseases, and brain aging Investigation of molecular pathogenesis on hereditary neuromuscular disorders (Exploratory research on discovering novel therapies for intellectual disabilities, based on molecular studies on brain-type dystrophin Dp71)
Infectious Diseases	Professor Takaaki Nakaya	 Elucidation of the pathogenic molecular mechanisms of influenza virus and coronavirus Investigation of the pathogenic exacerbation mechanisms caused by viral genomic diversity Research on the dynamics of environmental infection of infectious pathogens Metagenomic studies on severe respiratory infectious diseases Developmental research of novel devices for the detection of pathogenic microbes Diagnosis, treatment, and epidemiological research on viral and parasitic infections
Immunology	Professor Osam Mazda	 Molecular mechanisms of the somatic cell reprogramming, especially direct conversion, and application of the reprogrammed cells to regenerative therapy Exploration of chemical compounds that inactivate viruses, analysis of the molecular mechanisms of the virus inactivation, and application of the compounds to anti-virus defense Molecular mechanisms and regulation of anti-tumor immune responses Molecular mechanisms and regulation of allergic responses Molecular mechanisms and regulation of antiviral immune responses

Subject	Advisor(s)	Research Topics
Molecular Pharmacology	Professor Atsushi Umemura	 Development of novel drug treatment strategies for cancer Development of pharmacological strategy for lifestyle-related diseases and cardiovascular diseases Development of pharmacological strategies for obesity and fatty liver disease Anti-inflammatory and anti-fibrotic therapies for chronic inflammatory diseases Signaling mechanisms of reactive oxygen species aimed at clinical application Comprehensive analysis using genetically modified animals
Psychiatry	Professor Jin Narumoto	 Cognitive behavioral therapy for depression, obsessive-compulsive disorder, and panic disorder Neuroimaging study of psychiatric disorders Liaison psychiatry including palliative care Diagnosis and treatment of dementia and community support Clinical study of the diagnosis and treatment of eating disorders Clinical study of medication-related adverse events
Radiology	Professor Kei Yamada	 Clinical applications of diagnostic methods using functional imaging such as MRI and X-ray computed tomography (CT) Analysis of tracer dynamics in living organisms using nuclear medicine and development of molecular imaging Development of new procedures and treatment methods using Interventional Radiology (IVR) Establishment and optimization of radiotherapy methods Study of Al used diagnosis
Medical Chemistry	Professor Makoto Oba	 Design and synthesis of unnatural amino acids and their use in drug discovery research Study on peptide foldamers for artificial control of secondary structures Development of peptide-based drug delivery system Study on gene therapy and nucleic acid therapeutic Development and therapeutic applications of biological stimuli-responsive polymers and nanomaterials
Diagnostic and Therapeutic Radiology (Advanced Course)	Professor Kei Yamada	 Morphological diagnosis of cancers using MRI/CT imaging Diagnosis of cancers through functional/metabolic/molecular imaging and trace analysis using SPECT/PET Radiotherapy and isotope therapy of cancers in various organs Vascular and nonvascular interventional radiology of cancers in various organs

Subject	Advisor(s)	Research Topics
Digestive Surgery		 Study of peritoneal cancer metastasis using genetic diagnosis Utilization of new advanced technologies in laparoscopic surgery Cancer genes in gastrointestinal cancer Gene therapy for cancer Basic and clinical study of cancerous peritonitis Improvements in performance of surgical treatments for gastrointestinal cancer Cancer-targeted drug delivery systems (DDS) Surgical treatments for gastrointestinal cancer Surgical treatments for gastrointestinal cancer
Transplantation and Regenerative Surgery		 Organ preservation Formation mechanisms of transplantation immune responses and immune tolerance induction Immunosuppressive therapy after kidney transplantation Clinical and experimental study of liver transplantation Clinical and experimental study of pancreas transplantation and simultaneous pancreas-kidney transplantation Genetic study of xenografts Research and development of new immunosuppressants
Endocrine Surgery	Professor Yasuto Naoi	 Study and development of minimally invasive treatments for breast cancer Study and development of breast reconstruction methods with high aesthetic outcome and curability Study and development of treatments and selection methods for breast cancer considering drug sensitivity and safety Study and development of molecular-targeted drugs for breast cancer Study and development of supportive treatments for adverse events of breast cancer pharmacotherapy
Cardiovascular Surgery	Professor Shinichiro Oda	 Development of small-diameter artificial blood vessels Development of valvuloplasty procedures in valvular disease surgery Development of artificial heart valves through application of cellular engineering Development of artificial conduits for right ventricular outflow tract reconstructions in children Development of left ventricular reconstructive surgery based on evaluation of myocardial viability Development of stentless mitral valve implantation using the patient's own heart Development of evaluation methods for revascularization surgery using computer simulation Development of MRI analysis evaluation methods for postoperative endoleaks after aortic stent graft repair Development of synthetic vascular grafts using in vivo regenerative medicine
General Thoracic Surgery	Professor Masayoshi Inoue	 Clinical study of minimally invasive surgery for lung cancer Clinical study of multidisciplinary treatments for locally advanced lung cancer Microenvironment of lung cancer and metastatic pulmonary tumors Clinical study of minimally invasive surgery for mediastinal disease Immunological pathology of malignant thymic epithelial tumors Immunological pathology of myasthenia gravis

Subject	Advisor(s)	Research Topics
Neurosurgery	Professor Naoya Hashimoto	 Molecular mechanisms of brain dysfunction and regeneration Molecular pathophysiology of and optimum treatments for cerebrovascular disorders Biology of brain tumors and individualized treatment Molecular pathophysiology of traumatic brain injury and brain protection Pathophysiology and neuromodulation of functional neurosurgery Image-based analysis on brain and spinal function
Orthopaedics	Professor Kenji Takahashi	 Pathological analysis of the musculoskeletal system (locomotor system) using nuclear magnetic resonance (NMR) Regeneration of peripheral nerves/tendons Regeneration of spinal intervertebral discs Pathology of idiopathic osteonecrosis of the femoral head (ONFH) Development of early diagnosis methodologies for osteoarthritis Pharmacotherapy development for osteoarthritis and rheumatoid arthritis Analysis of bone microstructures in osteoporosis Promotion of bone fusion through biophysical stimulation Three-dimensional biomechanics of the joints and spine Development of gene analysis and gene therapy for the musculoskeletal system Pathology of muscle injury Development of antimicrobial coatings for biomaterial Chronobiology of the musculoskeletal system
Department of Pediatric Orthopedic Surgery (Advanced Course)	Associate Professor Toshiharu Shirai	 Pathology of Perthes disease and development of treatment methods Development of antibacterial medical materials using photocatalysts Utilization of the Ilizarov method for limb deformity correction/lengthening Clinical application of methods to promote provisional bone formation through biophysical stimulation Development of methods to monitor bones using bio-impedance measurements Biomagnetic field measurements using SQUID Development of treatment methods for premature epiphyseal plate closure
Rehabilitation Medicine	Professor Yasuo Mikami	 Development of rehabilitation therapy applying biophysical stimulation (magnetic stimulation, electrical stimulation, etc.) Elucidating the effects of activities on the mind and body Development of treatment methods for muscle weakness (sarcopenia) Developing a treatment method to maintain and improve muscle strength and physical strength when spending time in space or in bed rest
Department of Sports and Para- Sports Medicine (Advanced Course)	Associate Professor Yuji Arai	 Training methods for disabilities in sports and trauma prevention Physiological responses during exercise unique to people with disabilities Effects of adaptive sports on health Development of training methods to win at the Olympic and Paralympic Games Development of robots to support staff affiliated with adaptive sports and families

Subject	Advisor(s)	Research Topics
Ophthalmology	Professor Chie Sotozono	 Tissue engineering concerning corneal regeneration Molecular cell biology of corneal stem cells Ocular immunology Pathology of severe drug eruption and ocular disease Pathogenic mechanisms of glaucoma Molecular cell biology of retinal wound healing Visual functional analysis in refractive surgery Tissue engineering in ocular formation Pathology of age-related macular degeneration
Otolaryngology- Head and Neck Surgery	Professor Shigeru Hirano	 Laryngology: laryngeal wound healing mechanism, regenerative medicine, neural networks controlling voice, swallow, and respiration Head and neck oncology: immune-environment of squamous cell carcinoma of the head and neck, molecular target and immune-therapy, head and neck cancer in elderly Otology: molecular mechanisms of auditory functions, clinical diagnosis of hereditary deafness, immune-environment of inner ear Equilibrium: eye movements and visual perception Rhinology: molecular biological research of the pathology of chronic paranasal sinusitis and respiratory tract diseases, development of new treatment methods for allergic rhinitis
Urology	Professor Osamu Ukimura	 Diagnosis and treatment of urological tumors Function-preserving surgery Molecular-targeted therapy Regeneration in the field of urology Neurophysiology in the field of urology
Anesthesiology		 Prevention and treatment of sepsis and acute lung injury Mechanism for inflammation induction and regression through surgical invasion Blood coagulation and platelet functions during the perioperative period Mechanisms of anesthesia Molecular mechanism of postoperative pain
Palliative Medicine	Professor Fumimasa Amaya	 Epidemiology of chronic pain Mechanisms of chronic pain Mechanisms of cancer pain Development of ultrasound guided nerve block technique Development of chemotherapy induced neuropathic pain treatment
Dental Medicine	Medical Professor Narisato Kanamura	 Molecular biological analysis of oral disease Basic and clinical study of dental/oral diseases and systemic diseases Basic and clinical study of regenerative medicine for oral tissues Effects of odontogenic infection on cancer treatments and transplantation therapy Oral care in the perioperative period Structural analysis of oral tissue using Raman spectroscopy and development of new device. Clinical application of novel biomaterials for dental.

Subject	Advisor(s)	Research Topics
Comprehensive Palliative Care Medicine (Advanced Course)	Professor Fumimasa Amaya	 Development of novel opioid receptor analgesics Epidemiology of opioid analgesics Epidemiology of palliative care medicine Development of interventional pain treatment against cancer pain Epidemiology of Advance Care Planning Development of palliative care educational tool for residents Practical training of end of life care
Cellular Regenerative Medicine	Research Professor Ping Dai	 Conversion of somatic cells to neurons using small-molecule compounds: study on molecular mechanism for direct conversion to chemical compound-induced neuronal cells(CiN cells) Genetic characterization of CiN cells Functional analysis of CiN cells in vitro and in vivo Development for conversion methods of somatic cells to cell types other than CiN cells using small-molecule compounds

Professional Training Course in Cancer Medicine

Subject	Advisor(s)	Research Topics
Molecular Hematology and Oncology	Professor Junya Kuroda	 Classification/action mechanisms of and actual treatments using anticancer drugs and molecular-targeted therapy drugs Multidrug combination therapy and high-dose chemotherapy combined with hematopoietic stem cell transplantation (HSCT) Countermeasures against side effects and adjuvant therapy for anticancer drugs and molecular-targeted drugs Genomic analysis of onset mechanisms of cancers and hematological malignancies Basic study of HSCT therapy Development and basic study of molecular-targeted drugs
Diagnostic and Therapeutic Radiology	Professor Kei Yamada	 Morphological diagnosis of cancers using MRI/CT imaging Diagnosis of cancers through functional/metabolic/molecular imaging and trace analysis using SPECT/PET Radiotherapy and isotope therapy of cancers in various organs Vascular and nonvascular interventional radiology of cancers in various organs
Comprehensive Palliative Care Medicine	Professor Fumimasa Amaya	 Development of novel opioid receptor analgesics Epidemiology of opioid analgesics Epidemiology of palliative care medicine Development of interventional pain treatment against cancer pain Epidemiology of Advance Care Planning Development of palliative care educational tool for residents Practical training of end of life care
Pediatrics	Professor Tomoko Iehara	 Clinical studies and clinical trials to establish standard treatments for children and Adolescent and Young Adult (AYA) with cancer Research to analysis for genetic abnormalities of pediatric cancer Research to develop new treatments for pediatric cancer
Obstetrics and Gynecology	Professor Taisuke Mori	 Surgical treatment for gynecological cancer (uterine cervical, endometrial, ovarian cancer) Chemotherapy, molecular targeted therapy, and radiation therapy for gynecological cancer Fertility preservation therapy for gynecological cancer Challenges of onco-fertility therapy for cancer survivors
Respiratory Molecular Medicine Dermatology	Professor Koichi Takayama	 Clinical pharmacology of anticancer agents Chemotherapy for lung cancer using cytotoxic anticancer drugs Molecular-targeted therapy for lung cancer Current state of clinical trials for lung cancer Surgical treatments for malignant skin tumors
		 Chemotherapy for malignant skin tumors Immunotherapy for malignant skin tumors
Molecular Gastroenterology and Hepatology		 Basic and clinical studies and clinical trials concerning hepatic and gastrointestinal cancer IVR, local treatment, systemic therapy, and radiotherapy for liver cancer Systemic therapy for pancreatic cancer, stomach cancer, colorectal cancer, biliary tract cancer and gallbladder cancer Chemoradiotherapy for esophageal cancer
Digestive Surgery		 Recommendation of clinical studies of gastrointestinal cancer Surgical therapy for gastrointestinal cancer Chemotherapy as an adjunctive therapy for gastrointestinal cancer

Subject	Advisor(s)	Research Topics
Endocrine Surgery	Professor Yasuto Naoi	 Pharmacotherapy systems for breast cancer Hormone therapy for breast cancer Chemotherapy for breast cancer Molecular-targeted therapy for breast cancer
General Thoracic Surgery	Professor Masayoshi Inoue	 Clinical study of multidisciplinary treatments for locally advanced lung cancer Microenvironment of lung cancer and metastatic pulmonary tumors Immunological pathology of malignant thymic epithelial tumors
Neurosurgery	Professor Naoya Hashimoto	 Molecular cytogenetics of brain tumors Surgical treatment and image/fluorescence-induced surgery of brain tumors Multidisciplinary treatments and immunotherapy for brain tumors Individual optimization of treatments for metastatic brain tumors
Orthopaedics	Professor Kenji Takahashi	Chemotherapy for malignant bone and soft-tissue tumors
Otolaryngology- Head and Neck Surgery	Professor Shigeru Hirano	 Induction chemotherapy for head and neck cancers Chemoradiotherapy for head and neck cancers Superselective intra-arterial injection combined with chemoradiotherapy for head and neck cancers Adjuvant chemotherapy for head and neck cancers Ambulatory chemotherapy for head and neck cancers Molecular-targeted therapy drugs for head and neck cancers
Urology	Professor Osamu Ukimura	 Pathology and consultation/treatment of renal cancers, bladder cancers, prostate cancer, and testicular tumors Immunotherapy and molecular-targeted therapy for renal cancer Chemotherapy and immunotherapy for bladder cancer Endocrine therapy, chemotherapy, and function-preserving surgery for prostate cancer Chemotherapy for testicular tumors

Training Course in Forensic Generalist, Forensic Specialist

Subject	Advisor(s)	Research Topics
Forensic Medicine	Professor Hiroshi Ikegaya	 Forensic pathology Forensic toxicology Utilization of microorganisms in forensic medicine Disaster response and abuse prevention Medical jurisprudence and bioethics Methodology for age estimation using aging factors

Testing Center Access Map
